

MOTOR DEALERSHIP VEHICLE SECURITY

Application Note

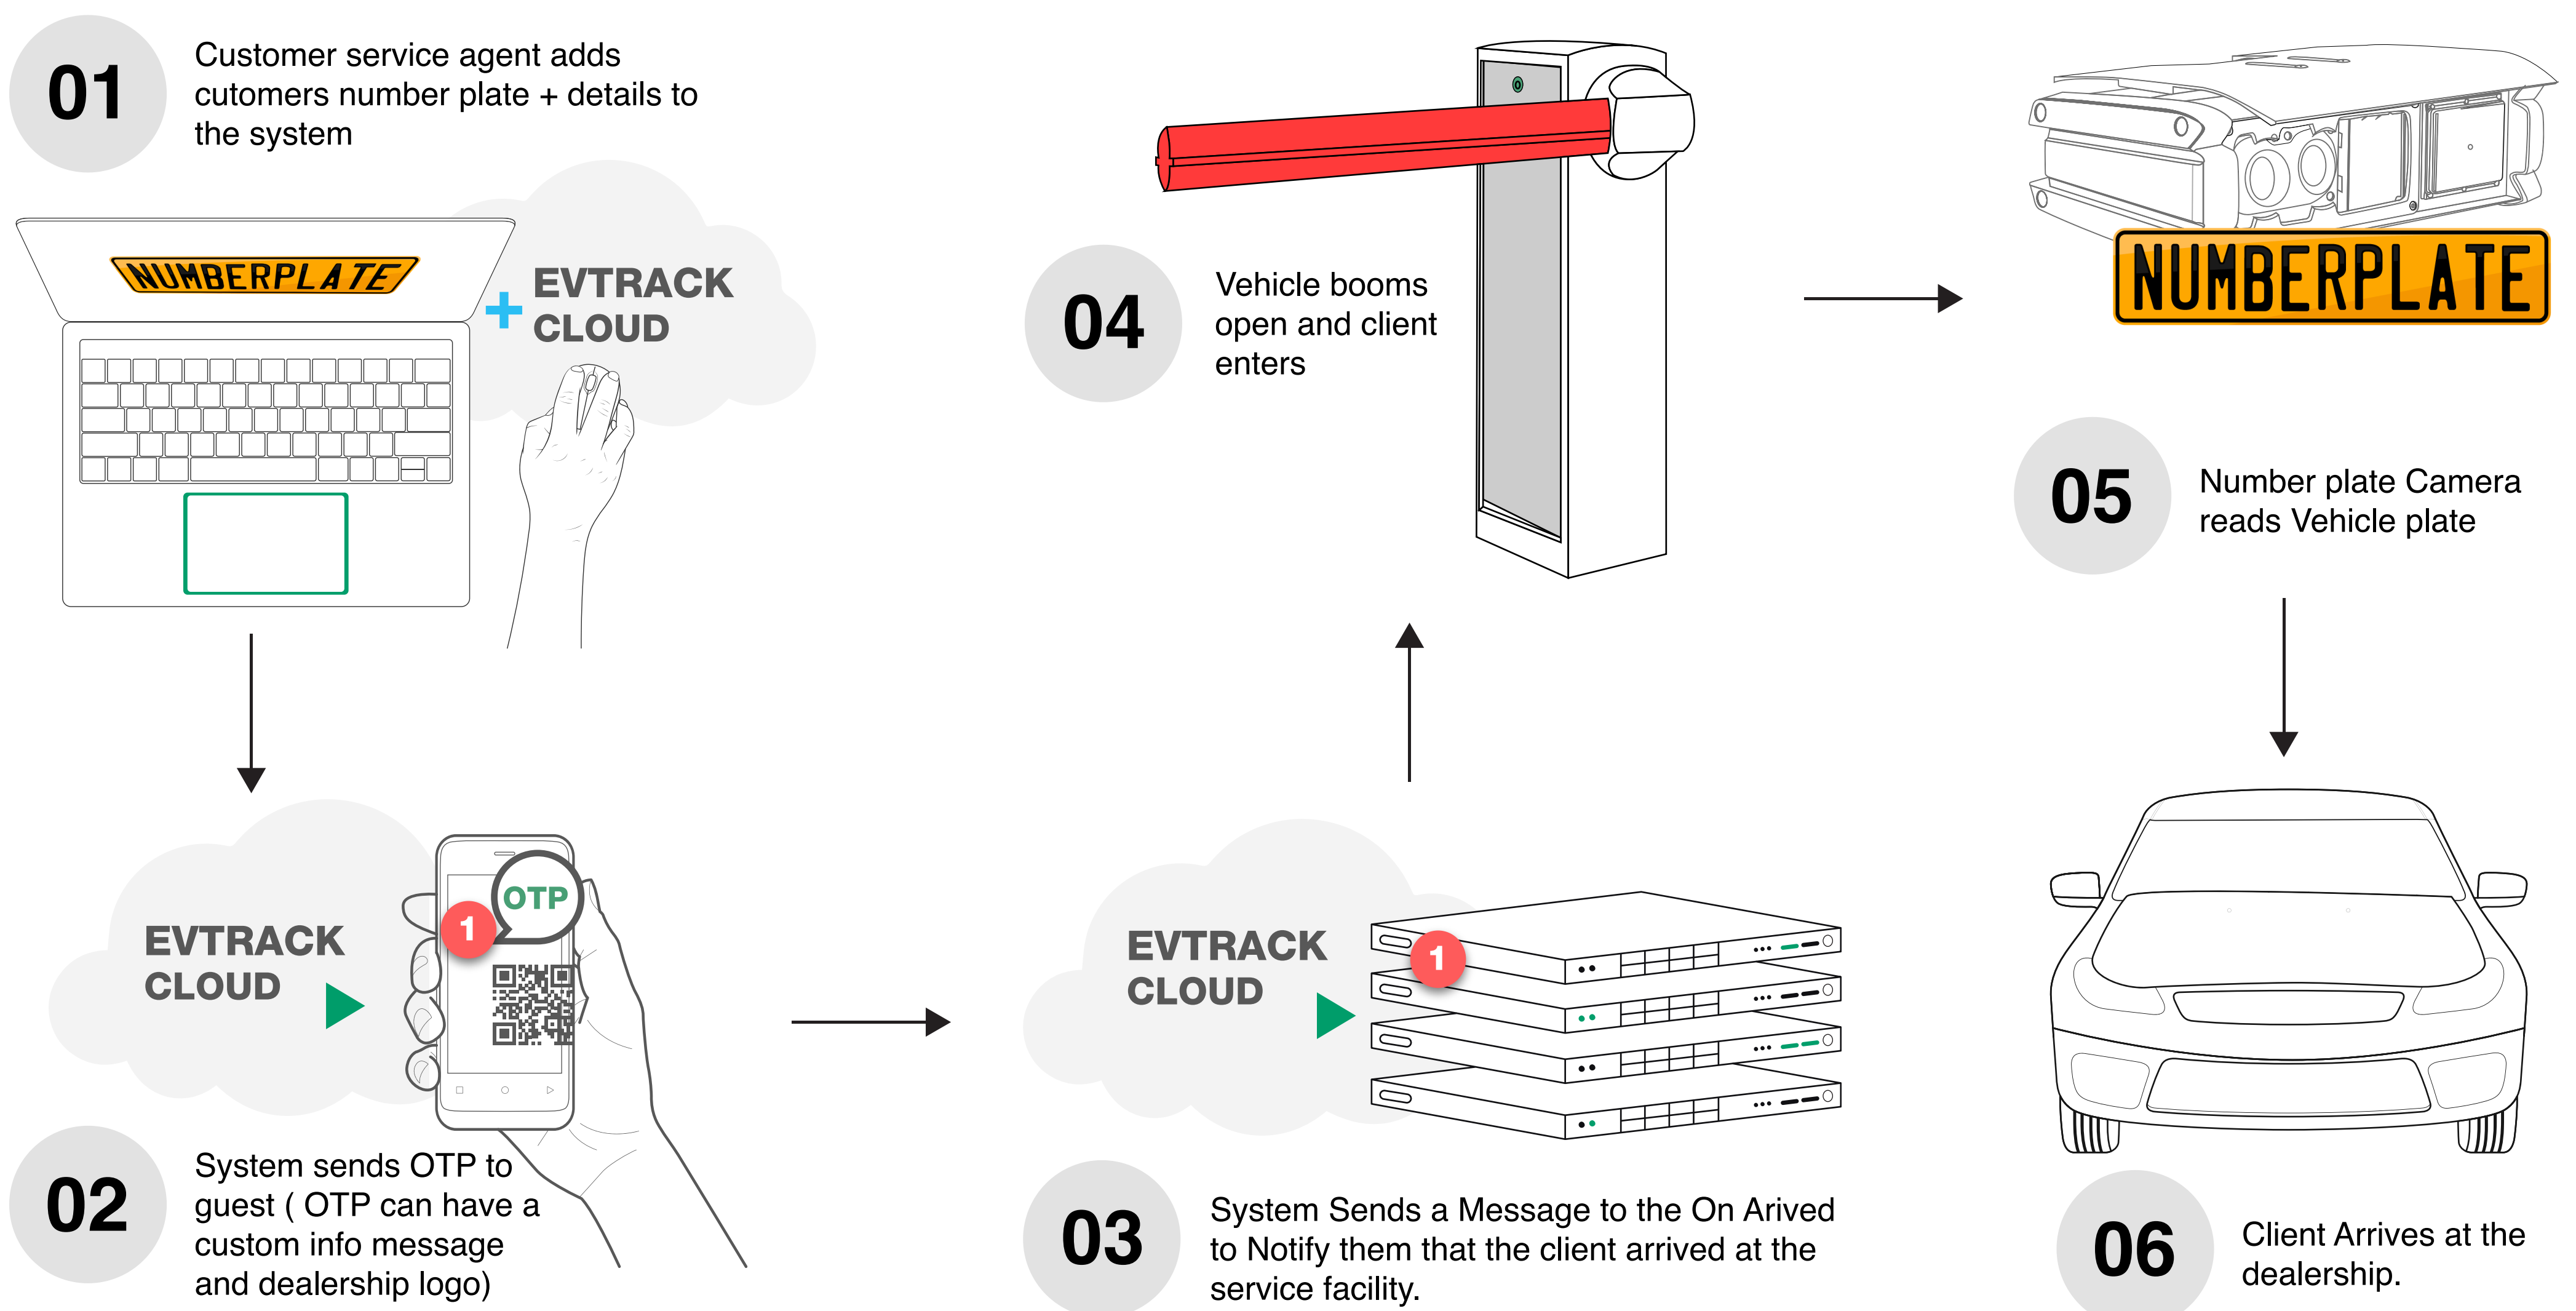

The protection of motor vehicle dealership stock is always a challenge as the asset value is high and the stock is easily accessible to the public as well as obviously being highly mobile. The physical access control of vehicles in this application is essential as is the creation of an audit log as some vehicles may be dealer vehicles, some head office stock and others customer vehicles. With motor vehicle dealerships, the visitor and access control flow is the reverse of normal building security. Here one wants easy entry for customers but strict exit for all vehicles. The functional requirements of a motor vehicle dealership access control system should include:

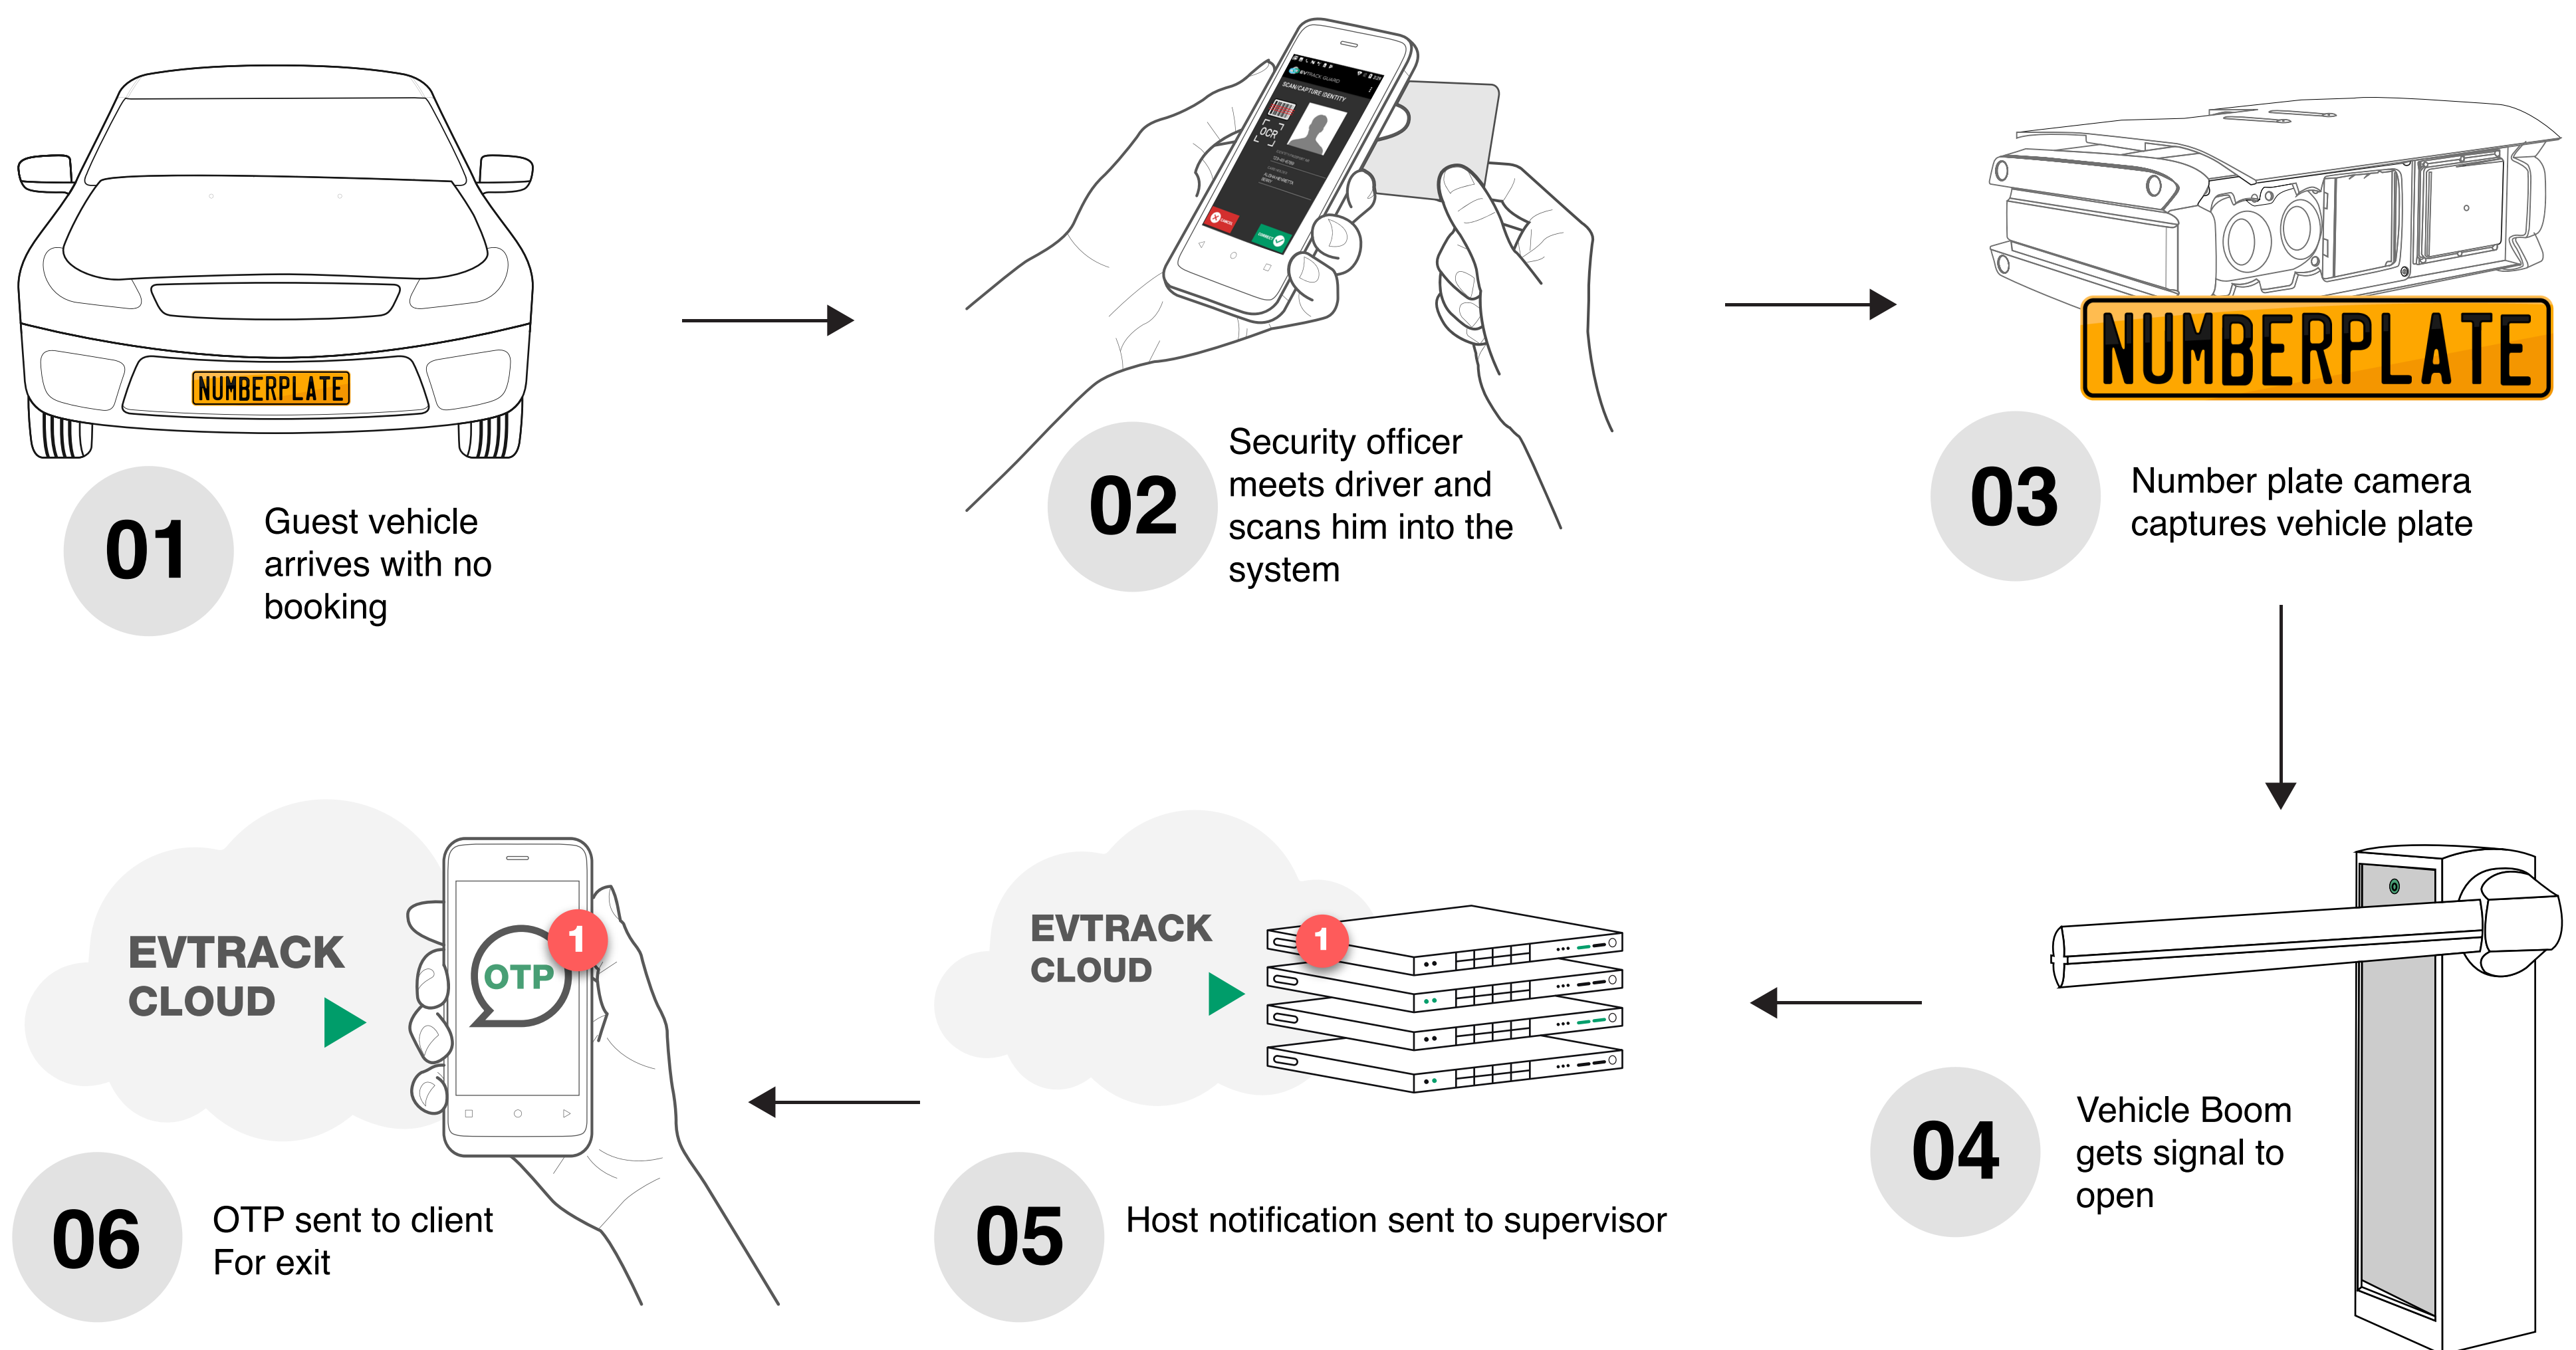

Features

- ✓ Pre-Registration of Customer Vehicles
- ✓ Authorised Employee Driver Database
- ✓ Automated Numberplate Recognition for Customer or Dealer Stock
- ✓ Issuing of Temporary Credentials for Customer's Collecting Vehicles
- ✓ Double Credential Verification On Removal of Vehicles From Site
- ✓ A Security Officer Friendly Software Application
- ✓ Direct Interfacing with Motorised Vehicle Barriers
- ✓ Support for Printable Employee Badge Creation with Photo ID & Role
- ✓ Web-Based Management Interface for the Dealership
