Access Control
Integration

On Premise
or Cloud

EvTrack is an enterprise visitor management and access control platform that automates the complete physical access journey — from pre-registration and credential provisioning through to real-time access enforcement and audit reporting. Deployed across corporate headquarters, government facilities, residential estates, aviation sites, and high-security installations, EvTrack helps organisations eliminate manual processes, enforce compliance, and maintain visibility over people and vehicles entering or exiting.

With offices in South Africa and the UAE and a growing channel of distributors and system integrators across the Middle East, Africa, Europe, and North America, EvTrack integrates directly with the world's leading access control platforms — including Genetec, Gallagher, Suprema, Avigilon, Hikvision, Nedap and SAFR — delivering a single pane of glass for visitor and credential management across any infrastructure.

The Value We Provide

- ✓ **Operational Cost Cutting** — Automate registration, credentials, and guard processes to reduce headcount dependency.
- ✓ **Eliminate Bottlenecks at Entry** — Self-service kiosks, pre-registration, and touchless access keep access points moving.
- ✓ **Improve First Impressions** — by speeding up the process and keeping visitors happy.
- ✓ **Works With What You Already Have** — Layers on top of your existing access control infrastructure with direct integrations to Genetec, Gallagher, Suprema, Axis, 2N, Hikvision, Avigilon, Nedap, SAFR, and more.
- ✓ **Handheld Visitor Scanning** — Allows visitor processing at the perimeter of your site or if your access points are mobile.
- ✓ **Deploy Your Way** — On-premise, Customer Cloud or EvTrack Cloud SaaS — same feature set, your choice of infrastructure.
- ✓ **Better Site Visibility & Audit Trail** — Know who is on site, where they accessed, and when they left, as well as visitor trends and data analytics across time — with visitor passes and a complete audit trail for GDPR, POPIA, and internal compliance.

Methods of Visitor Pre-Registration

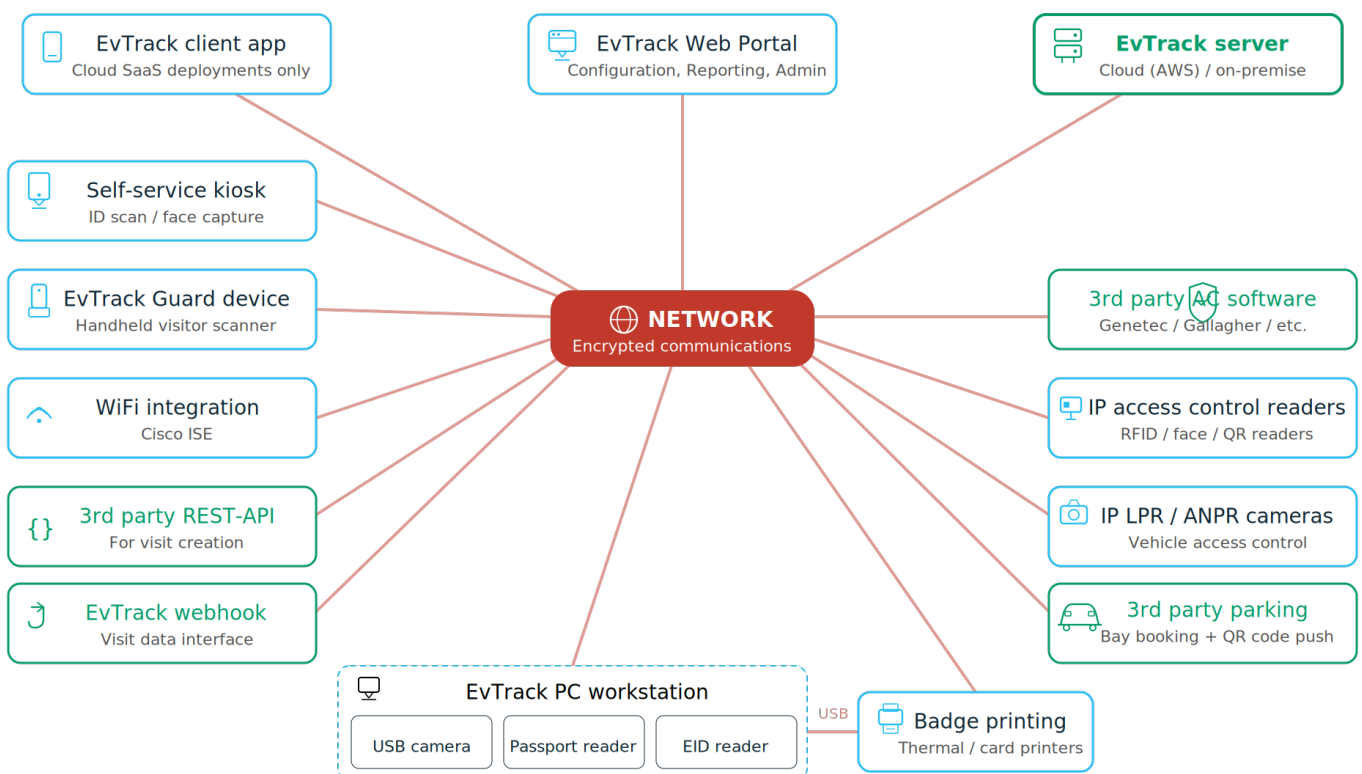

Walk-In Remote Visitor Host Approval

As an extra security layer before a visitor is granted access to enter a site, EvTrack can be configured to send an approval message to a host to approve the visitor. This message is sent to the host by email (standard), push notification (SaaS only) or SMS (optional).

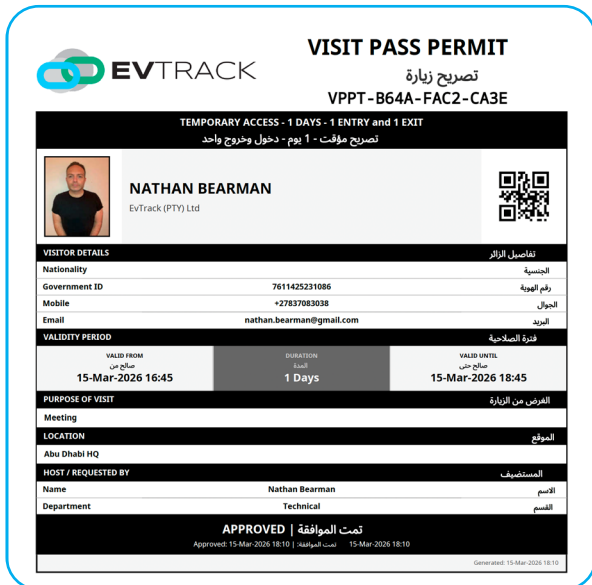

It includes a **photo of the visitor, the visitor's company, the visit reason, mobile number and ID number**. The host needs to simply select approve or deny. Once approved the visitor is granted access and his/her face is added to the access/control, or a QR code visitor pass is created and emailed to them.

EvTrack System Architecture (What EvTrack is Made Up Of)

What the Visitor Receives (Email + Visitor Pass + Visitor Badge)

Visitor Pass Permit

EvTrack supports the automated creation of formal visit pass documents that can be exported or automatically emailed as part of the visit pass approval process.

The standard template can be used or a client can import his/her own visit pass template with color scheme to match the organisation's branding. Dual Arabic / English language is available.

Some of the included data includes a QR code, use limit, duration & approved by.

Reporting & Visitor Analytics

Our solution features multiple forms of data retrieval; this includes a visitor dashboard, an access/control logbook and various exportable html or CSV reports. **A Google Big Query data warehouse interface is also an option.**

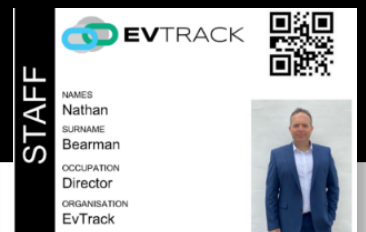

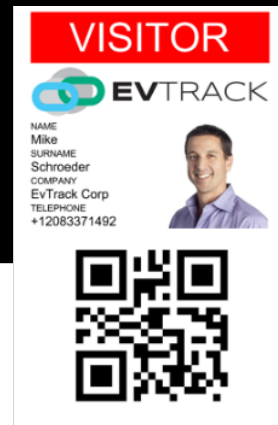

This includes visitor reports, system event reports, time/attendance reports and credential reports. We also offer graphical visitor analytics showing visitor metrics for the period selected.

Visitor QR Code Badge Creation

EvTrack allows the user to select from a standard range of badge templates or create one's own .SVG badge and import it.

Badges can be created for visitors or employees. Employee badges will feature a QR code, site logo, as well as group and other relevant info. For portable access control, these badges can be scanned by EvTrack's guard device to grant access into or out of site. Making it ideal for construction sites.

Visitor Vehicle Access Control

- ✓ Visitor Parking Pre-Registration with N/Plate
- ✓ Automatic Creation of LPR Credential on Camera
- ✓ N/Plate Drop Down For Future Parking Invites
- ✓ QR Code or OTP A/Control with LPR Capture
- ✓ Handheld Visitor Vehicle Registration
- ✓ Visitor QR/OTP Pass Verification
- ✓ Transparent IP I/O Board Control For Vehicle Boom Automation while using the handheld.

EvTrack - FrontDesk Visitor Kiosk Operation

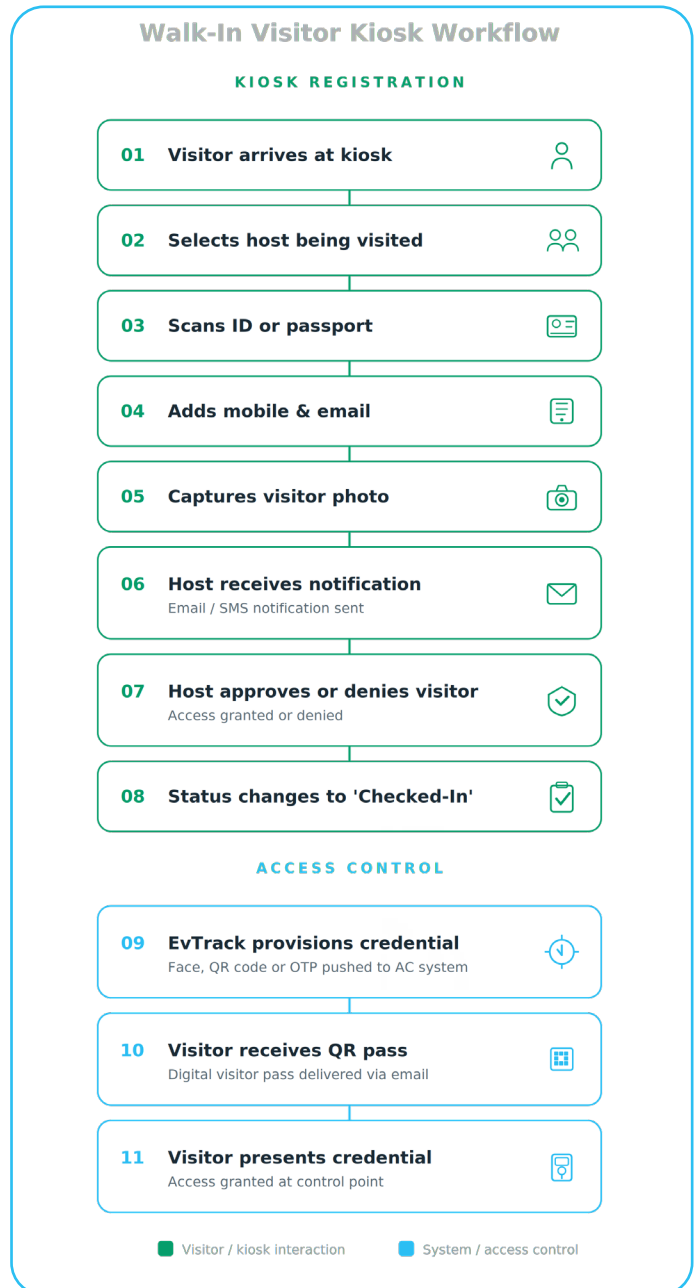

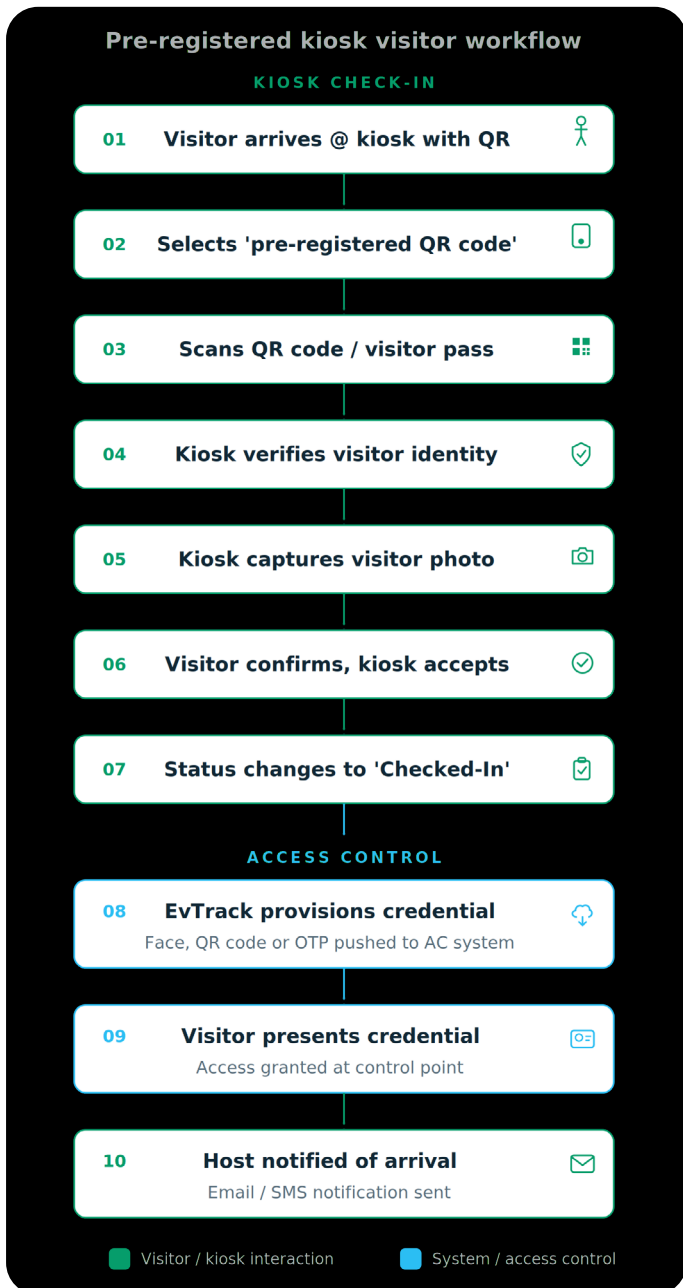

Features

- ✓ Pre-Registered Visitor Check-In
- ✓ Identity Verification & Face Anti-Spoofing
- ✓ Visitor Face Find, Crop + Capture
- ✓ ID, Passport or Drivers License Scanning
- ✓ Host Approval by Email, Push or SMS
- ✓ Optional QR Visitor Pass Printing

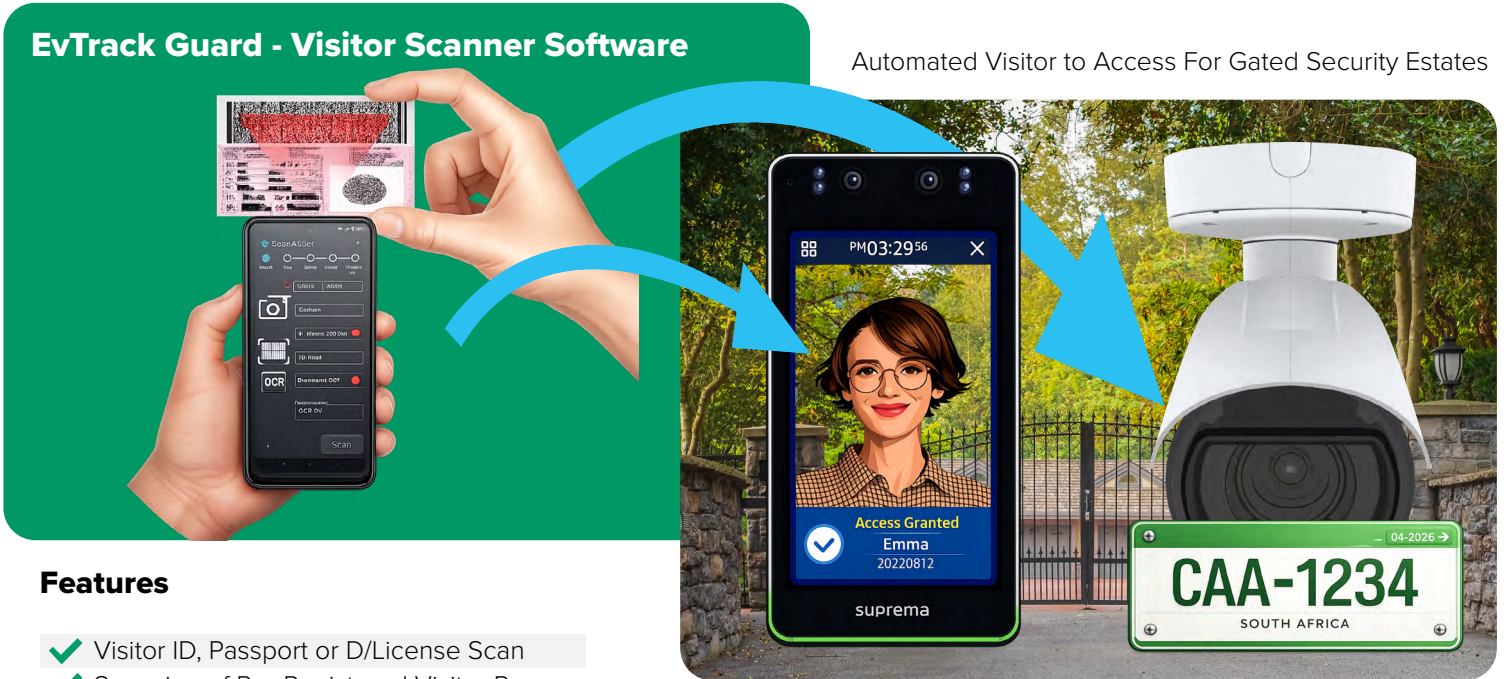

Visitor Self Check-In — Pre-registered visitors arrive with a digital QR visitor pass on their smartphone, scan at the kiosk, verify ID and check in within 30 seconds — a real force multiplier at work for your security or reception.

Kiosk Visitor Workflows (Pre-Registered Visitors) and Walk-In Visitors (Ad-hoc)

EvTrack Guard - Visitor Scanner Software

Automated Visitor to Access For Gated Security Estates

Features

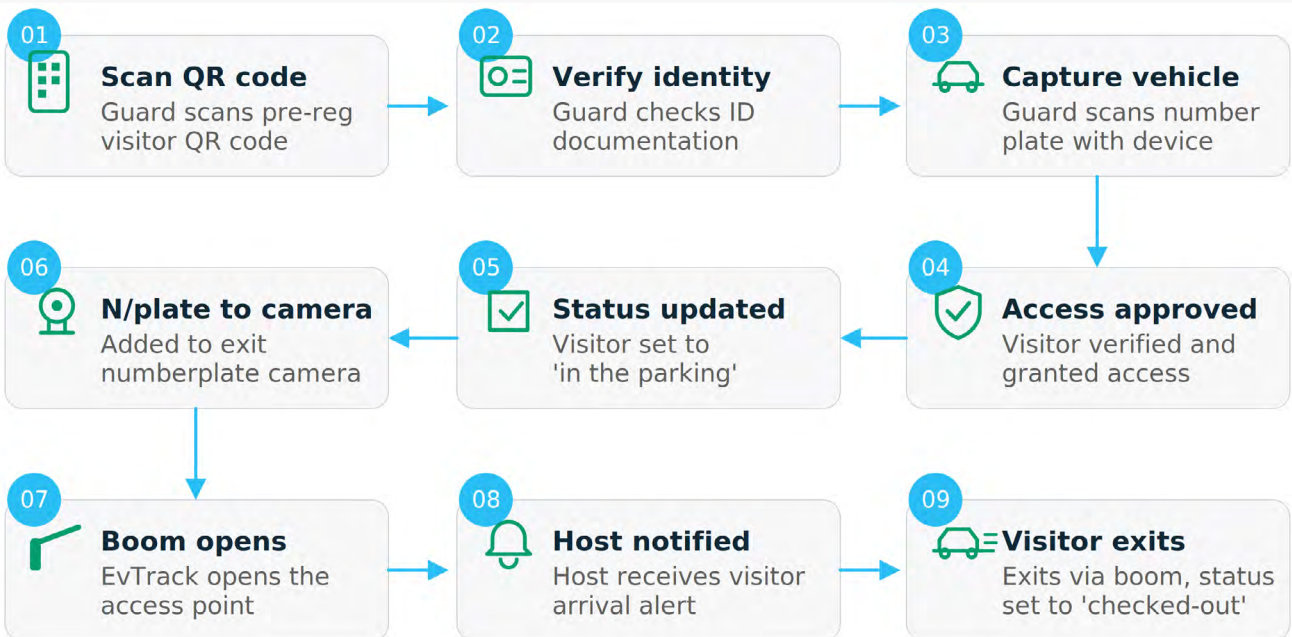

- ✓ Visitor ID, Passport or D/License Scan
- ✓ Scanning of Pre-Registered Visitor Pass
- ✓ Custom Visitor or Personnel Questions
- ✓ Face + N/Plate + License Disc Capture
- ✓ Vehicle or Passenger Capture
- ✓ Visitor Badge Printing via Bluetooth
- ✓ EID Scanning via USB Reader
- ✓ Guard Log-In via RFID Tag/Card or Pass

Automated Entry & Exit — On visit registration, EvTrack pushes facial and number plate credentials directly to the access control system. The visitor's face or vehicle plate is recognised at the gate, boom, or turnstile. On departure, the visitor is able to use their registered credentials to exit as required, reducing pressure on the guards.

Supported handheld device brands

Walk-In Visitor Workflow with Handheld Visitor Scanning

Credentials expire automatically when visitor checks out or visit period ends

Self Service Visitor Kiosk Models

ELITE-01 / ELITE-02

Elite-Series Large Format Self-Service Kiosk
