

VISITOR SELF-SERVICE FLOOR STANDING KIOSK

VIP-03

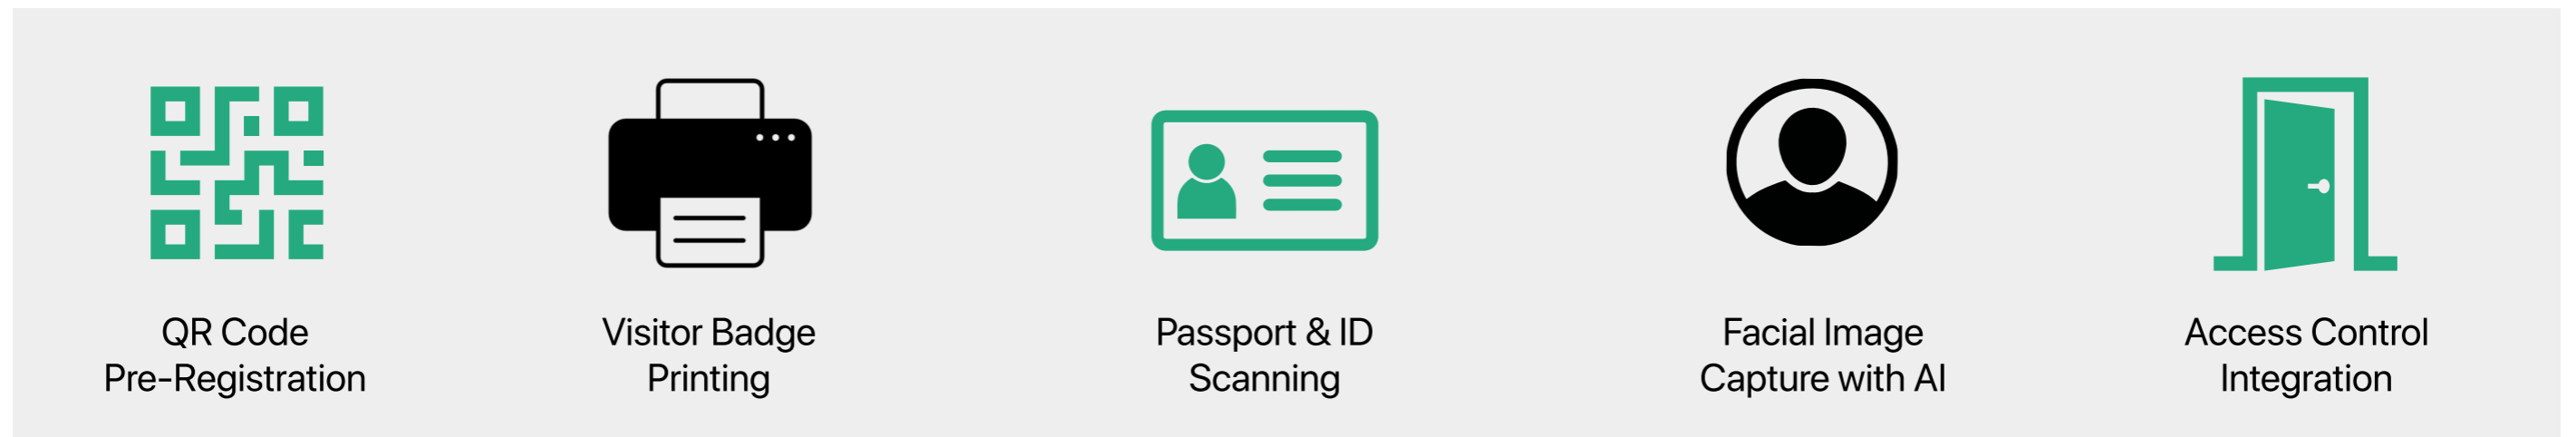

VIP-03 FREE STANDING EVTRACK VISITOR KIOSK INTRODUCTION

EvTrack's VIP-03 kiosk is a floor-standing self-service visitor kiosk for visitor and guest management. Available as standard in black or white, the VIP-03 can also be supplied with various different side trim colors and logos to suit the customer's branding.

Each kiosk is constructed of a combination of rugged steel and aluminum with an ergonomic design ideal for capturing visitor identification and facial images. Integrated into the kiosk is a powerful embedded computer, touchscreen full hi-definition display, rear AI-enabled OCR ID and passport reading and a BW thermal visitor badge printer. It is also available with an optional smart card reader for Emirates ID card scanning or an optional 2D barcode scanner. The other optional order is a front mounted integrated optical passport or ID document reader which is designed for countries where the ID document is more difficult to 'read' data from. These all enable hi-speed visitor document data capture speeding up visitor registration.

EvTrack provides seamless access/control for the visitor through its integrations with Genetec Security Centre, Gallagher Security, Suprema as well as Hikvision, Dahua, 2N, Axis and other IP Edge Hardware.
