

VIP-02-V3 VISITOR KIOSK

VISITOR REGISTRATION AND AUTOMATED ACCESS CONTROL KIOSK SOLUTION

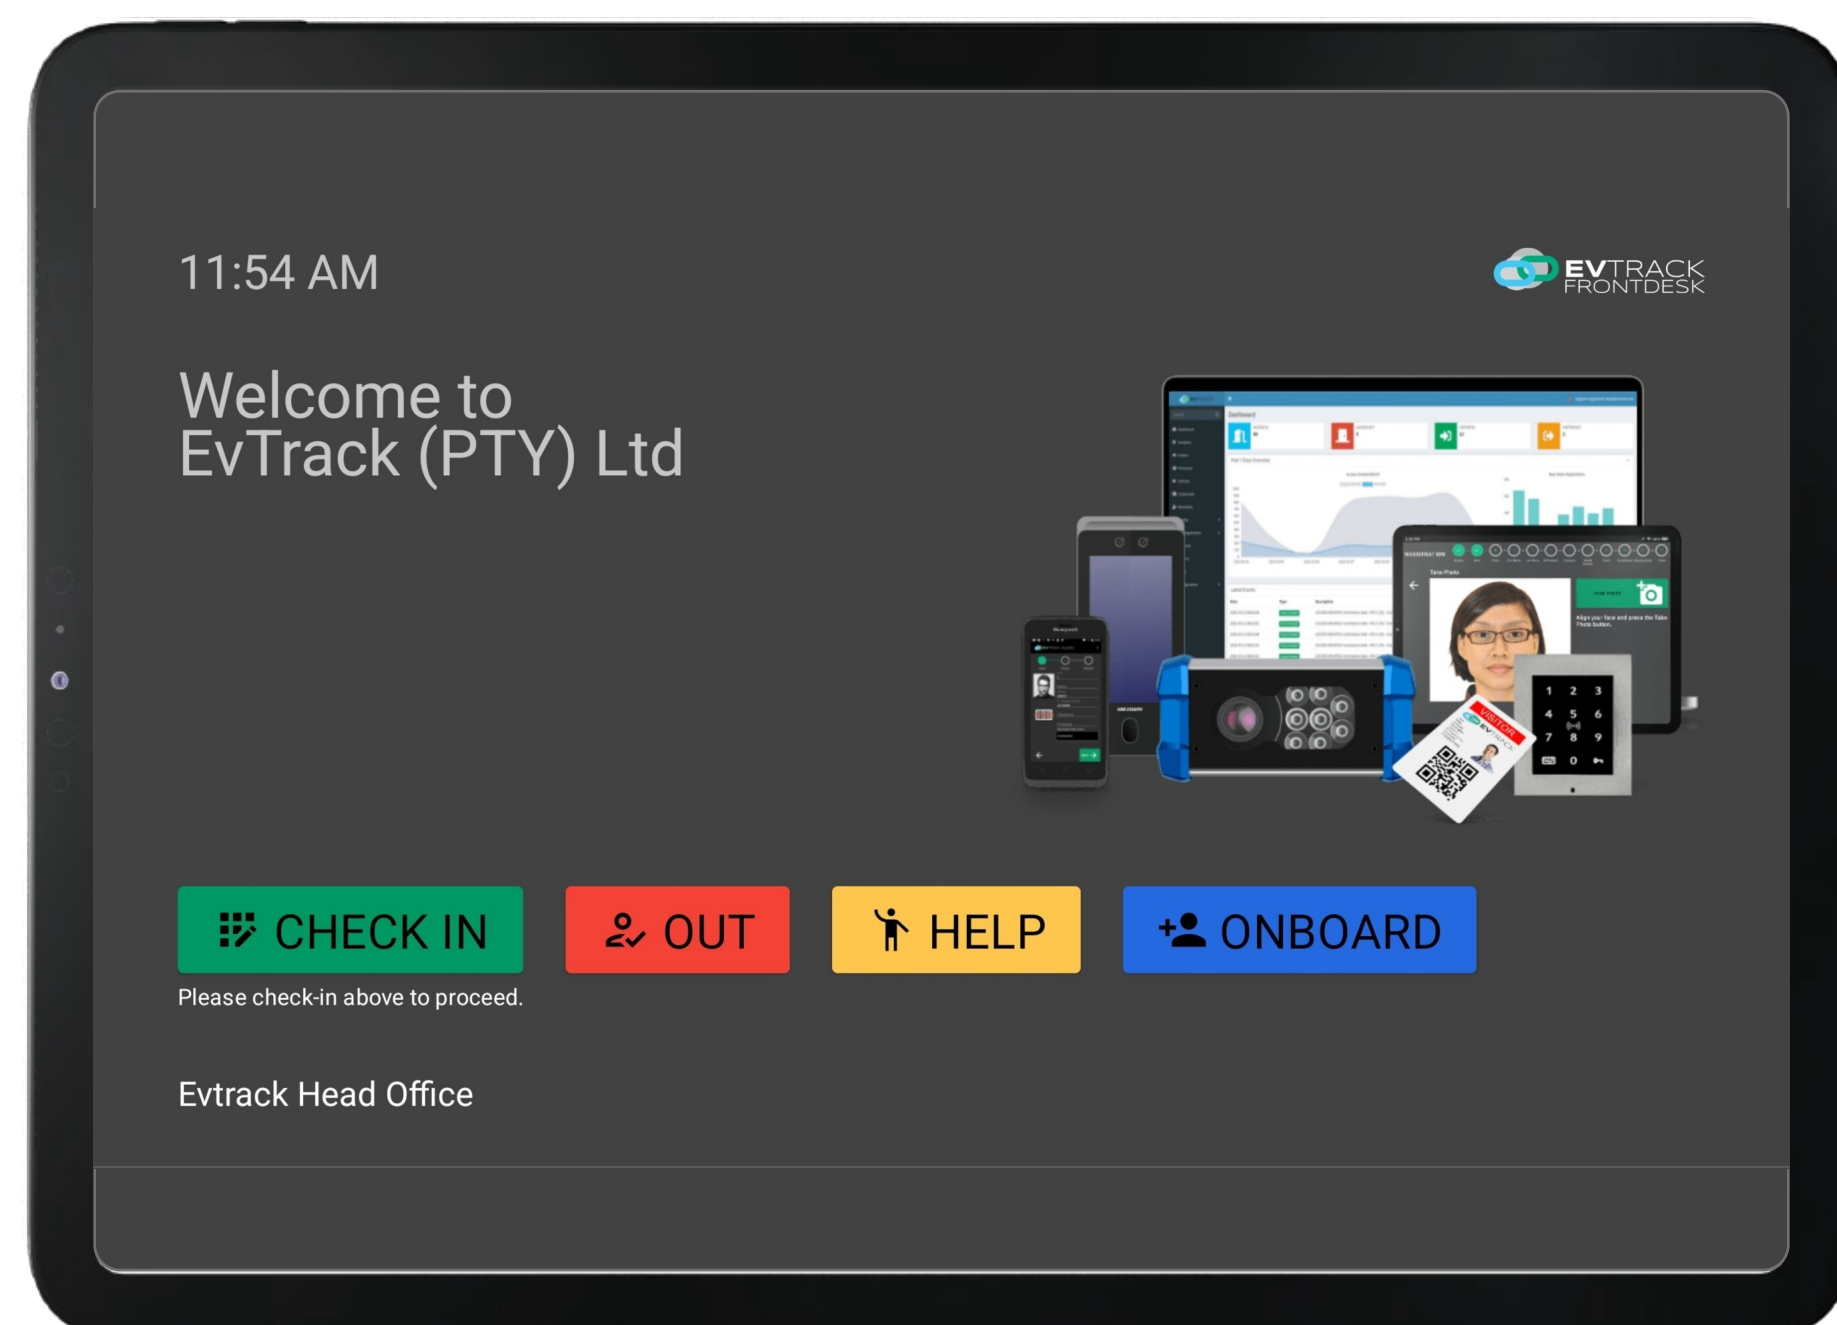

Introduction

Designed to automate the visitor registration process, our visitor kiosk forms an integral part of the EvTrack eco-system and allows a visitor to self-register on arrival at the site. The EvTrack VIP-02-V3 is the ideal digital concierge and complements or replaces the security officer at the reception equating to manpower savings onsite. It also notifies the host after the registration is complete & sends a temporary QR code or OTP credential to the visitor in order to open an access control door, boom or turnstile. The solution consists of a rugged touchscreen kiosk suitable for desk or countertop installation with optional printer or passport reader.

General Features

- ✓ Self Service Automated Visitor Kiosk
- ✓ Hi-Resolution Touchscreen Display
- ✓ QR Code Reading for Pre-Registered Visitors
- ✓ Hi-Speed Visitor Face Capture with Watermark
- ✓ Host Approval & Host Notification via Email or SMS
- ✓ QR Code Visitor Badge Printing (Model fitted with Printer)
- ✓ Wide Range of Access Control Integration
- ✓ Onboarding Function For Employees/Users

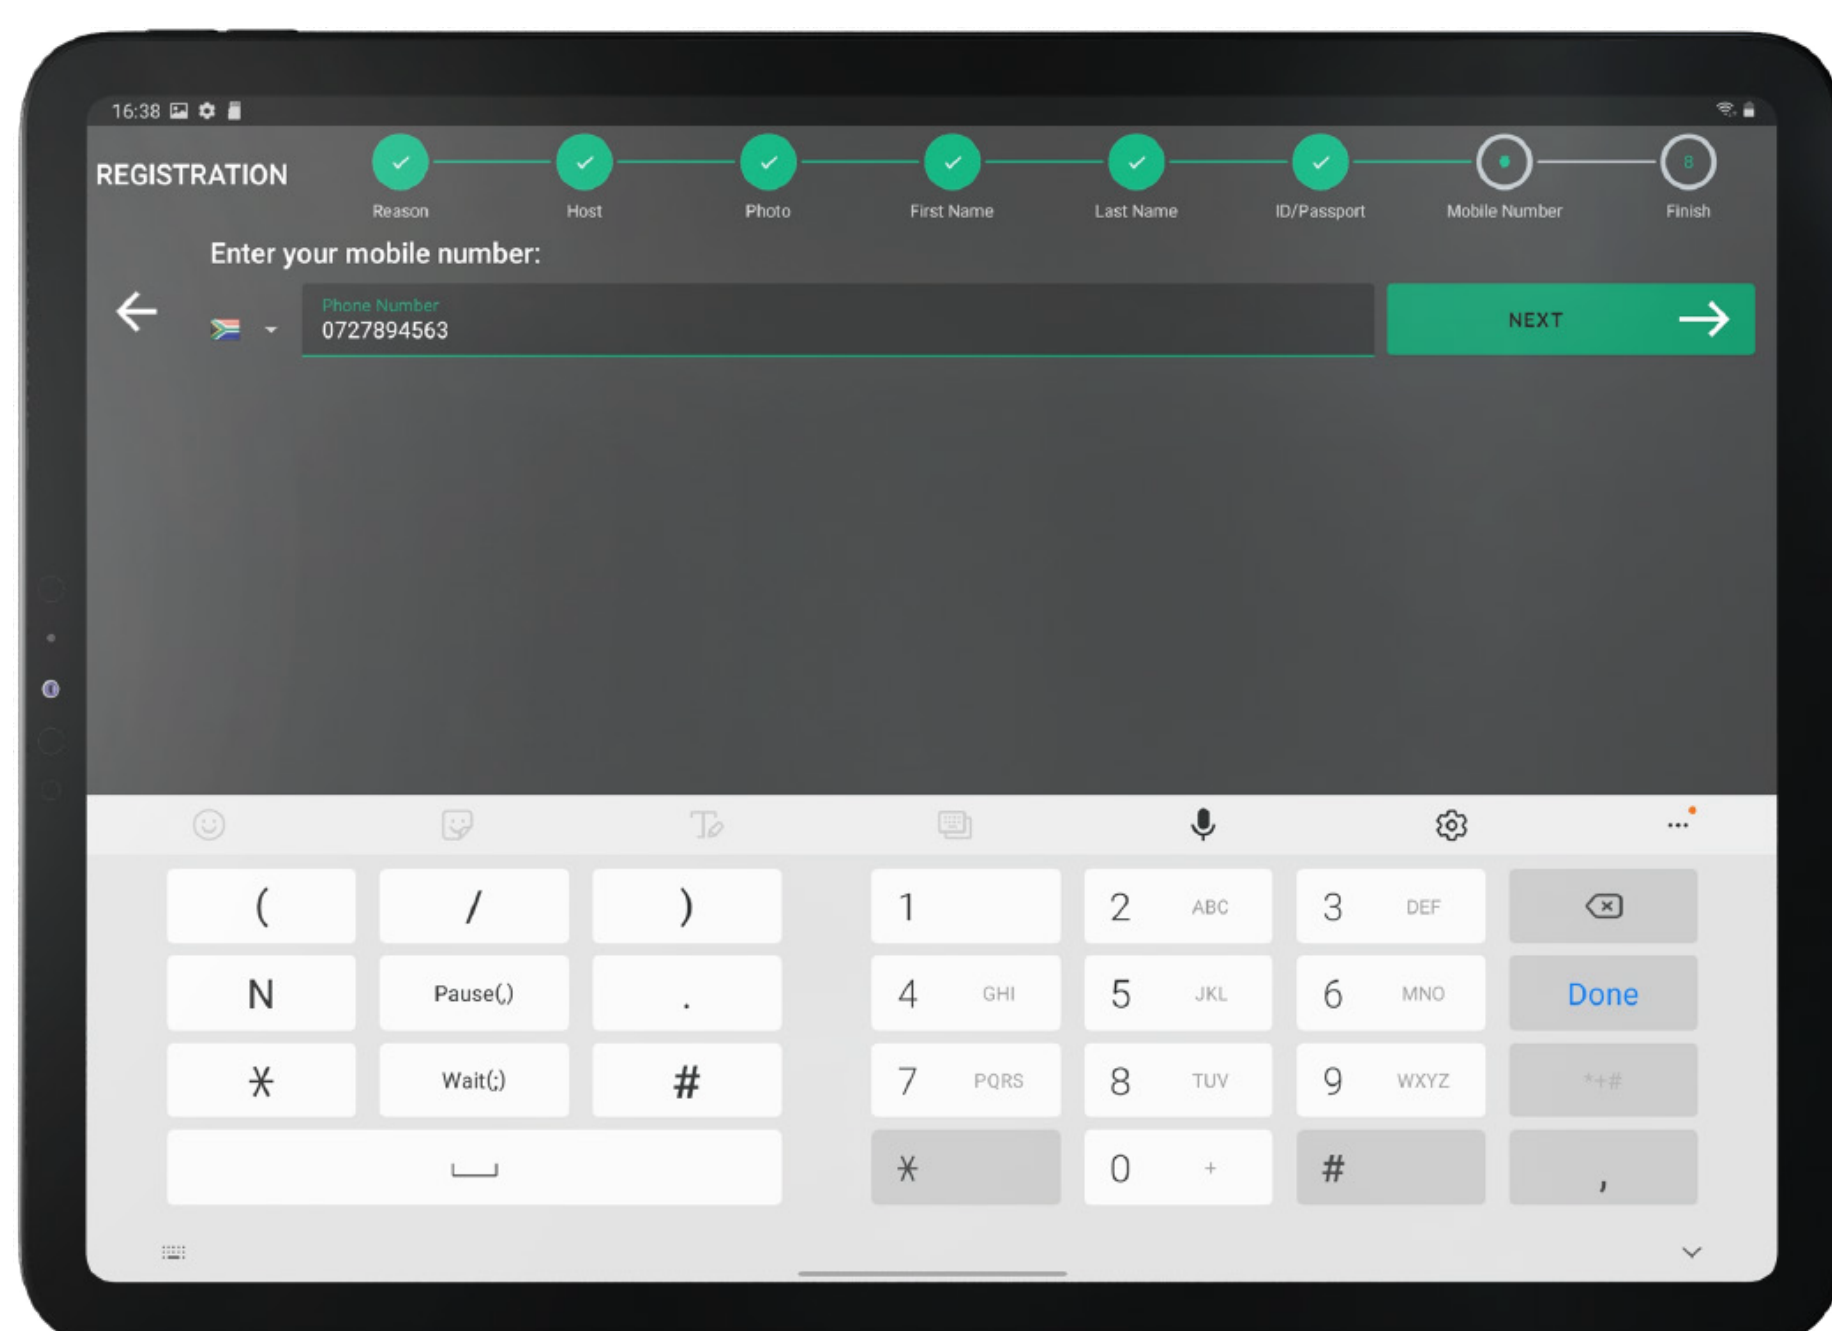

Optional ID/Passport Reader
or Optional 2D Barcode ID Scanner
or Optional Thermal Printer or Passport Reader

Visitor Data Capture fields

Required visitor data capture fields can be configured for each site. Including:

- ✓ Host Name (Person Being Visited)
- ✓ Location (Location Such as Apartment No, House, Floor etc)
- ✓ Visit Reason (Configurable Via the Web Portal)
- ✓ Name + Last Name (Can be Set as Optional)
- ✓ Mobile or Telephone Number
- ✓ ID / Passport Number
- ✓ Company (Optional)
- ✓ Email Address (Optional)
- ✓ Physical / Postal Address
- ✓ Nationality / Country of Issue
- ✓ Custom Fields

Integrated Software AI

EvTrack's front desk application features various machine learning AI components to speed up the visitor process, to capture the best photos possible, as well as ID or passport capture and at the end of the day ensuring the correct person gains entry.

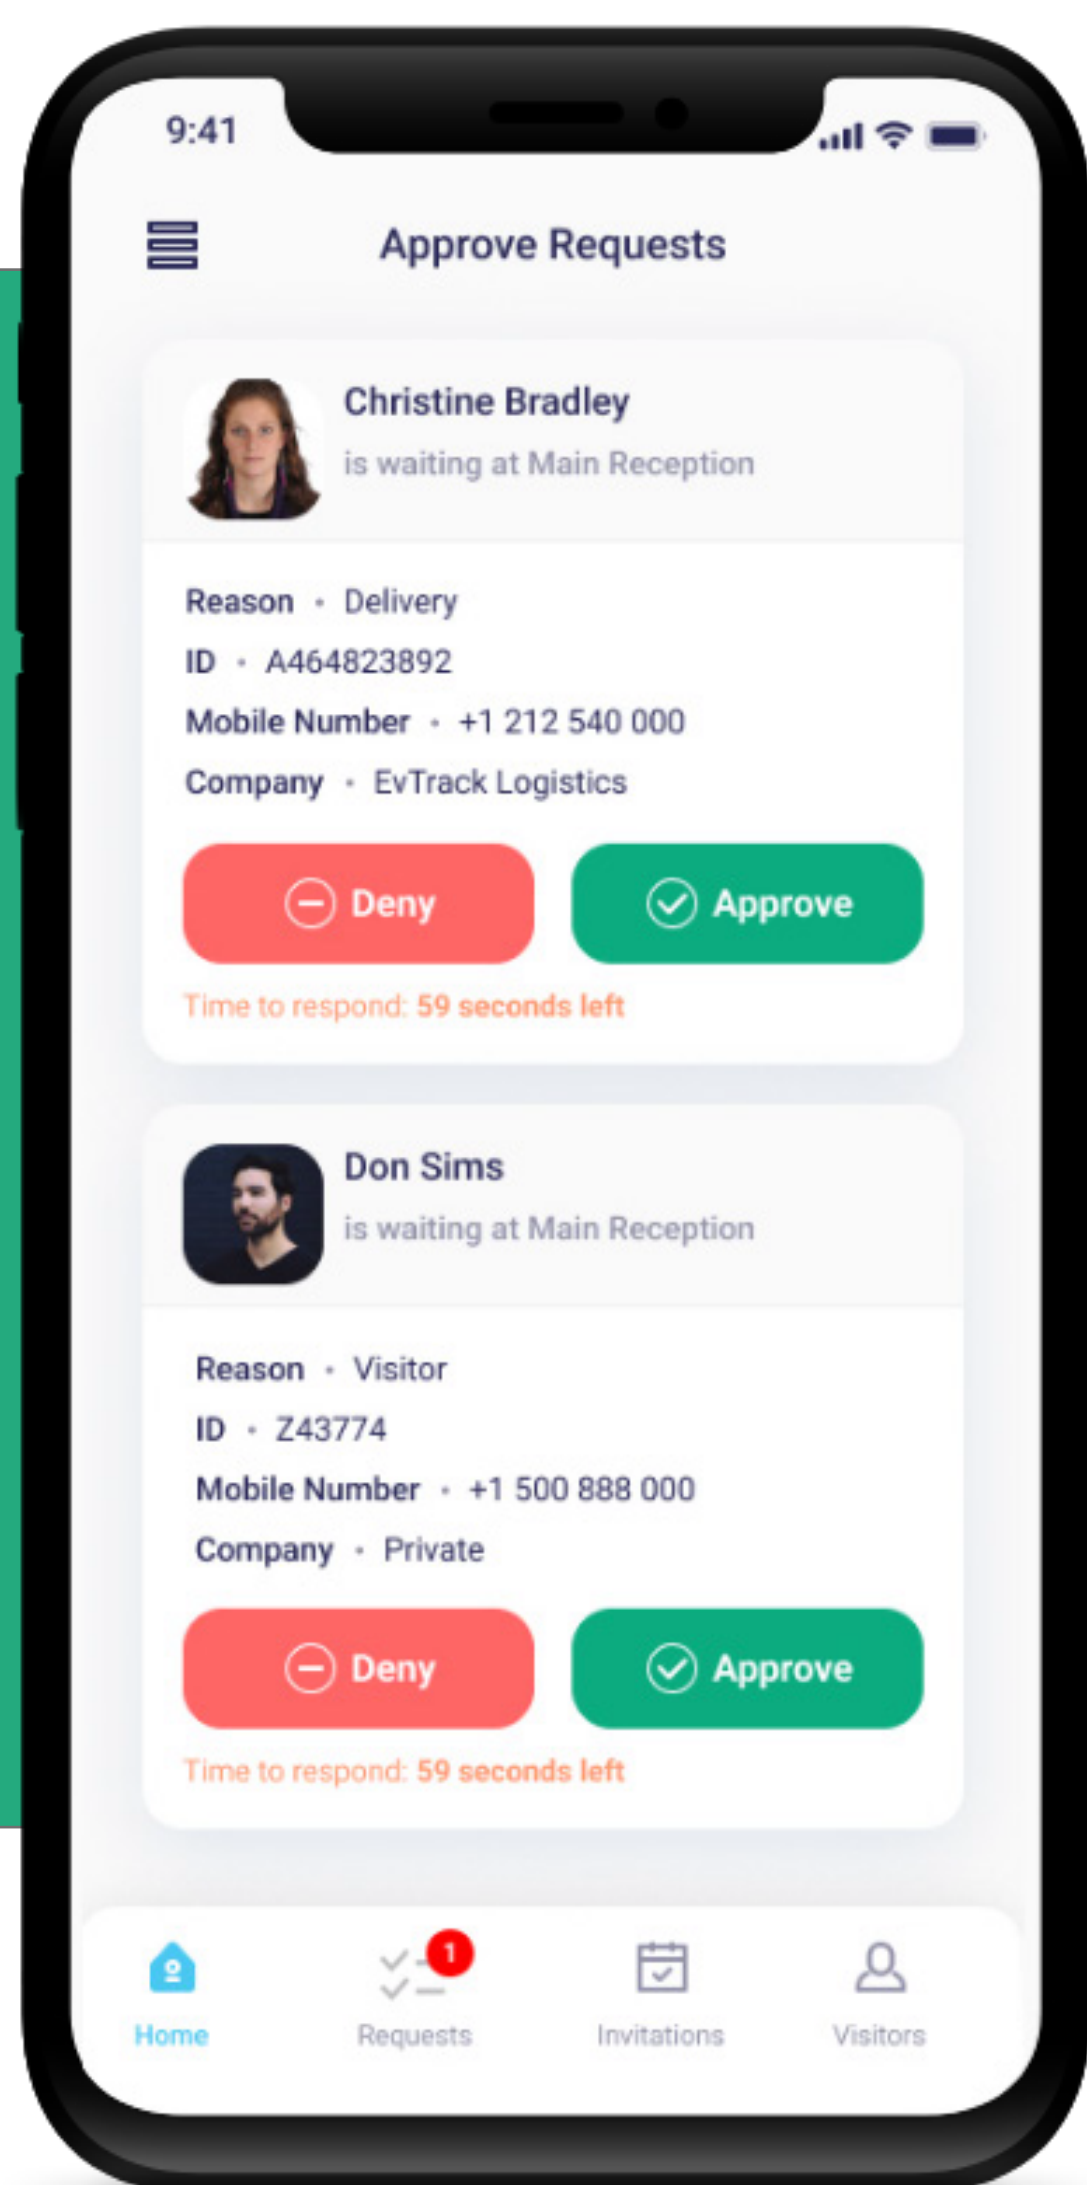

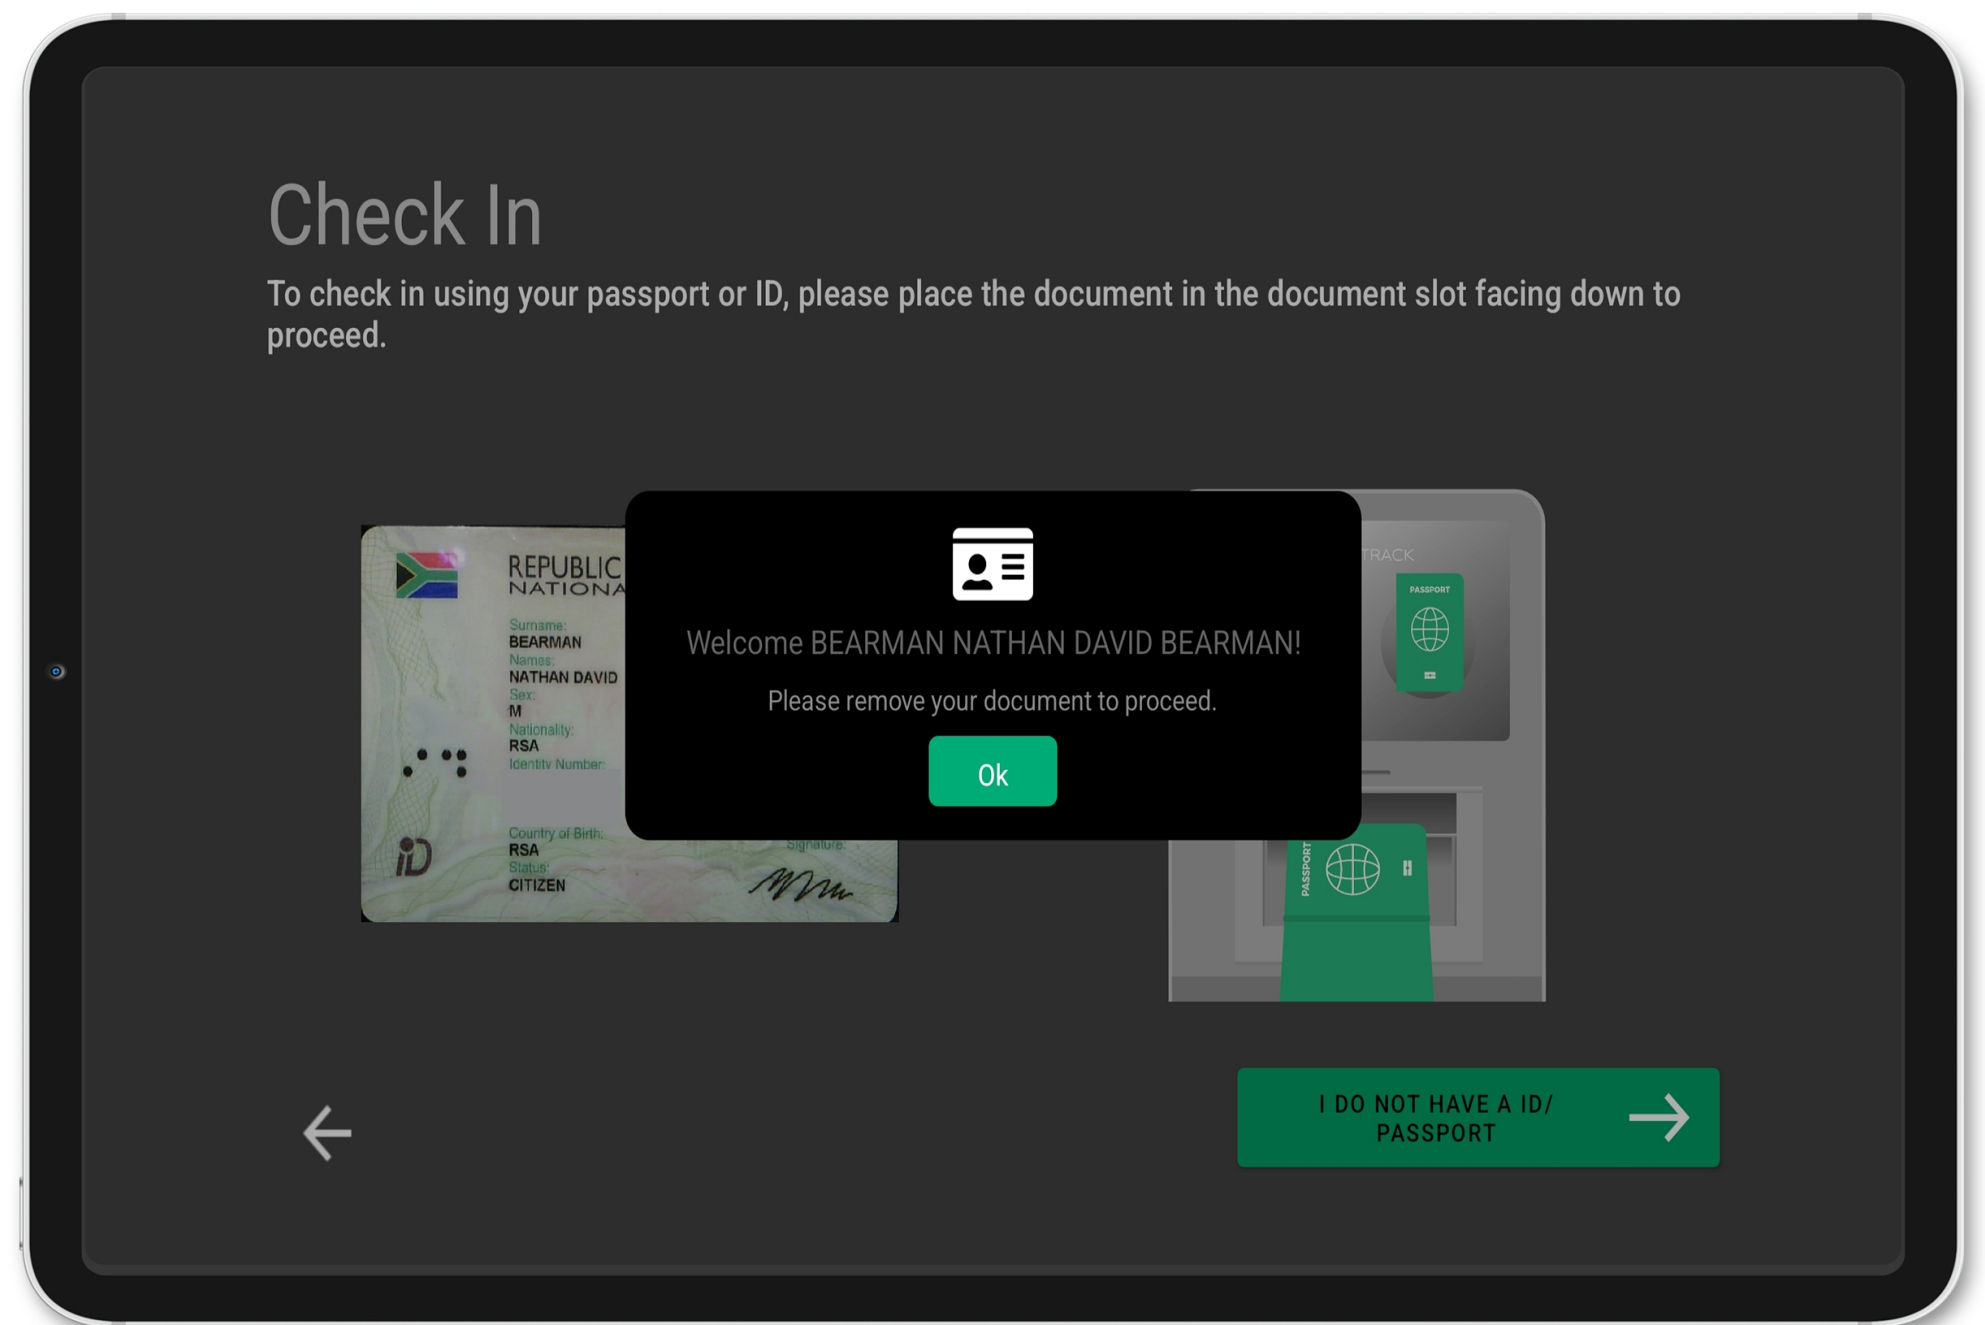

These functions include:

- ✓ Face Find, Angle Check, Crop, Background Blur + Watermark
- ✓ ID & Passport Face + ID Detail Extraction
- ✓ Pre-registered ID Versus Presented ID Verification
- ✓ Visitor Liveness Detection
- ✓ Visitor Face @ Kiosk Versus ID/Passport Verification

Id & Passport Scanning

The VIP-02-V3 is available with various options for ID or passport scanning. This helps speed up visitor registration as visitor details can be automatically scanned into the system by the visitor presenting a passport or compatible ID card. We can support the identity documents from most countries including:

Host Approval

Depending on the security required at the site, EvTrack Front Desk can be configured to request authorisation from a host.

After the visitor has completed the self-service registration process, a message is sent to the host with a photo, name & ID (optional) of the registered kiosk visitor.

Messages are received by the host via email, SMS or through the EvTrack client smartphone application (cloud only). The host can then choose to **approve** or **deny** the person access by selecting deny or approve.

After which the visitor receives a temporary access control credential to allow them access into the building via an access control gate, pedestrian turnstile, vehicle boom, elevator or access control door.

Access Control Integrations

Providing seamless integration with access control hardware, EvTrack has extensive support for direct interfacing with IP Access Control Hardware from 2N and Axis. As well as IP Face Readers from Hikvision.

QR Code or One-Time Pin Code credentials generated by the EvTrack Front Desk Solution are automatically transferred to the IP edge device for immediate visitor entry/exit access. Once the default use limit or expiry time/date has been reached, the credential is removed from the edge device. The host is also notified (via email or SMS) every time a visitor passes through an access control point.

EvTrack also integrates with 3rd party access control solutions such as Genetec Security Centre, Gallagher, SAFR, NEDAP & Suprema's Biostar 2.

System Architecture

EVTRACK FRONT DESK KIOSK

- Registration of Adhoc Visitors or Contractors.
- Scanning of Visitor Invite QR Codes
- Generation of QR Codes for Visitors
- Printing of Visitor QR Badges (Optional)

EVTRACK CONNECT CLIENT APPLICATION

- Operates on Android, Apple or Huawei
- Used for Sending Visitor Invites
- Digital QR Code for Access Control
- Approve Visitors
- Community App Features
- Cloud Hosted Version only (SaaS)

OPERATIONAL MANAGEMENT

- Permanent Contractor or Employee Enrolment
- Issuing of Temporary Access Permits / Invitations
- Audit Reports (Access/Control Logs - Pdf or CSV)
- Badge Printing (With Name + Organisation + QR Code + Photo)
- Adjustment of Access Control Configuration
- Setup of Health & Safety Agreements / Questionnaires
- Visitor Data Analytics
- Visitor or Employee Enrolment via Registration Link

EVTRACK SERVER

- On-Premise Customer Hosted or AWS Cloud Hosted
- Encrypted Communication with Handheld Device
- Encrypted Communication with EvTrack Web Interface
- Encrypted Communication with EvTrack with A/Control

IP ACCESS CONTROL READERS

- RFID Readers
- LPR Cameras
- Biometric Face Readers
- OTP Keypads

ACCESS/CONTROL INTEGRATIONS

- Transfer of Visitor Data Incl Name, Facial Image, Credential, Arrival/Departure
- Supporting Gallagher Security, Suprema BioStar2, Genetec Security Centre, SAFR
- Updating of Visitor Credential
- Onboarding of Employees/Personnel

BADGE PRINTING

- Brother Printers
- Evolis Printers
- Zebra Printers
- Epson Printers
